

## BENEFIT FROM OUR PCB EXPERTISE

We can advise you on what is technologically feasible, and also help you to find the most cost-effective solution for your design. The earlier you contact us in the design process, regarding technological support, design feasibility and materials selection, the more effectively we are able to support you – and get your design completed.

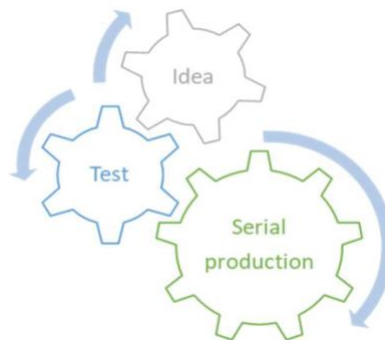

Contact us if your design or application includes:

- HDI (High Density Interconnect) including any layer technology
- FPC or Rigid-Flex applications
- Electronic heat management eg. for high performance and high current applications
- High-speed designs including selection of high-speed materials
- Special requirements for solutions for automotive/aerospace sectors (e.g. high vacuum)
- Medical technology solutions.

In addition to design and layout consulting, we also offer workshops and training courses. These can be arranged at your site. Choose your topics from an extensive list, available in both English and German.

Our specialist teams located across Europe will guide you with research and development to the finished printed circuit board.

Our NPI team support you with expertise and fresh ideas to meet your challenges.
